SUMMARY

Technical Product Marketing Manager specializing in AI infrastructure and developer platforms. Built positioning and sales enablement for an early-stage AI/HPC orchestration platform, translating Slurm and Kubernetes orchestration and NVIDIA GPU compute across public cloud, private cloud, and on-prem into narratives that land with ML engineers, CTOs, and investors. Mapped 50+ infrastructure competitors to inform differentiation strategy and objection handling. Currently building Nertia, an agent-native site builder shipped as both a web application and an MCP server, now carrying live client sites and a productized agency brand with published pricing. Founded two businesses ($10M+ revenue) with full ownership of P&L, positioning, and GTM execution.

EXPERIENCE

Founder & Product Lead, Nertia (Portland, Oregon) Dec 2025 – Present

- Designed and shipped an agent-native site builder (Next.js, TypeScript, Claude API, Firebase) that generates, edits, and publishes production websites; client sites are live and transacting on the platform today.
- Built the platform's Model Context Protocol (MCP) server, exposing site creation, section layout, copy editing, SEO, and GitHub-based publishing as tools AI agents invoke directly, making the product fully operable by Claude and other agents without a UI.
- Repositioned the product from an AI brand generator to a full site builder after research showed the durable customer need was shipping and maintaining live sites, not generating identity assets.
- Set the product's economics against category convention as a positioning decision, not a technical one: everything included by default rather than unbundled into add-ons, hosting and domains passed through at cost, and export left open with no contract, betting retention on the product being worth staying for instead of on switching costs.
- Launched Plotswitch, a productized agency brand running on the platform, to pressure-test that positioning and its pricing against real buyers: published tiers (base build plus per-page and named add-ons) and a competitive frame set explicitly against Squarespace, Wix, Webflow, and WordPress on lock-in and renewal pricing.
- Shipped live client sites across four verticals in six months: Pharm to Body (Shopify subscription commerce with a 12-week CSA program and workshop calendar), Pure Zero Photography (packaged service tiers with published entry pricing and a structured social-proof architecture), Bend Cleaning (full rename and rebrand from Cascade Cleaning, plus booking and review capture), and Full Scope Supply (commercial general contractor lead generation), owning naming, positioning, copy, SEO/GEO structure, and delivery on each.
- Own end-to-end GTM: positioning, pricing tiers, launch sequencing, and a distribution strategy seeding attributed "Built with Nertia" placements across design galleries, GitHub, and developer communities with UTM-level attribution.
- Dogfood the builder against real client deadlines and stakeholders, converting delivery friction directly into product roadmap.

Product Marketing Lead, Vantage Compute (Bend, Oregon) Jul 2024 – Aug 2026

Early-stage AI/HPC orchestration platform: a single, chip-agnostic control plane over Slurm and Kubernetes for AI/ML training, inference, simulation, and life sciences workloads, spanning public cloud, private cloud, and on-prem. Contractor from Jan 2026.

- Built positioning framework translating Slurm orchestration, NVIDIA GPU capabilities (H100, A100, L40S), and hybrid cloud architecture into buyer-centric value propositions; adopted across enterprise sales, investor presentations, and product documentation.
- Mapped positioning, pricing, and GTM across 50+ infrastructure competitors (CoreWeave, Lambda Labs, Together AI, Nebius); analysis directly informed platform differentiation strategy and enterprise sales enablement.
- Defined vertical-specific GTM narratives for four target markets (AI/ML Training, R&D Simulation, Advanced Manufacturing, Life Sciences), mapping platform capabilities to buyer pain points and competitive positioning.
- Delivered sales enablement assets (battle cards, technical one-pagers, demo narratives, Figma asset libraries) used in enterprise account briefings including Traton Group (Volkswagen/Scania) and investor presentations.
- Named and trademarked the category position Future Compute Layer™ (with VirtuallyLimitless™), framing Vantage as the hardware-agnostic layer above any compute Slurm can schedule (GPU, CPU, and quantum) rather than another

GPU provider; established brand voice guidelines and messaging hierarchy adopted in 95%+ of enterprise sales conversations and investor materials.

- Launched technical content program (blog, solution briefs, architecture documentation) optimized for AI search and semantic relevance, driving 35% of qualified pipeline within first 6 months.
- Led ground-up website redesign coordinating engineering, design, and executive stakeholders to a hard fundraising deadline; delivered in 3 months with full brand system integration.

Founding President, ScoutCamp (Portland, Oregon) Jan 2020 – Dec 2022

- Established sales and distribution network generating $10M+ revenue over 2020 to 2022; managed 30+ vendor relationships and territory strategy end-to-end.
- Owned P&L, supply chain optimization, and inventory strategy; assembled and led cross-functional team across sales, operations, and compliance.
- Developed training documentation and team processes adopted across the organization for consistency and scalability.

Business Development Manager, LTRMN (Portland, Oregon) Jan 2019 – Dec 2020

- Managed 80+ accounts, achieved 100%+ market expansion through data-driven territory mapping and account strategy.
- Produced visual collateral and sales materials tailored to distinct buyer personas, supporting new business development and account expansion.

Account Executive, The Sweet Life (Portland, Oregon) Oct 2017 – Dec 2019

- Managed 150+ accounts, drove 300% territory revenue increase through consultative selling and vertical expansion.
- Ranked highest-grossing AE in territory by identifying and capitalizing on new market segments.

User Experience Designer, Cloud Engage (Portland, Oregon) Mar 2014 – Oct 2017

- Developed custom demo environments and sales collateral for named enterprise accounts (T-Mobile, Columbia Sportswear), enabling personalized buyer experiences that supported deal progression.
- Partnered with engineering to redesign core applications and customer-facing interfaces.
- Unified brand identity across web properties and created technical documentation supporting product adoption.

SKILLS & EXPERTISE

Product Marketing & GTM

Product Positioning • GTM Strategy • Competitive Intelligence • Sales Enablement • Technical Messaging • Brand Strategy • Naming & Rebrand • Trademark Development • Pricing & Packaging • Launch Coordination • Investor Communications • SEO/GEO (AI Search) • CRM (Zoho, HubSpot) • Marketing Analytics (GA4)

AI & Agent Tooling

Model Context Protocol (MCP) Server Development • Agent-Native Product Design • Claude API • Prompt Engineering • LLM Tool Schema Design • AI-Assisted Development Workflows

Technical & Development

Next.js • React • TypeScript • Python • Tailwind CSS • Firebase • Shopify • Webflow • WebGL • Three.js • REST APIs • Git/GitHub • Core Web Vitals • Responsive Design • Figma • Brand System Design • CSS Token Systems • UI/UX Design • Notion

Infrastructure & HPC

Slurm Workload Manager • NVIDIA GPU Architecture (H100, A100, L40S) • NVIDIA GPU Operator • Kubernetes • Docker • HPC Concepts • Cloud Architecture • AI/ML Infrastructure Platforms • ML Frameworks (PyTorch, TensorFlow)

EDUCATION

Portland Community College – A.A.S. Web Development & Design, 2014 Central Oregon Community College – A.A.S. Computer Science, 2012
